

A photograph of a laptop screen displaying a search interface. The screen shows the word "Search" in red, a search bar with the placeholder text "I'm searching for...", and a red search icon. To the left of the laptop, two pinecones are visible. The text "SmartSearch" is overlaid in large white font across the center of the image.

# SmartSearch

Leiki SmartSearch is a search tool designed specifically for improving the results of domain and network searches. Each query is analyzed by **Leiki Focus**, our market-leading natural language text analysis system which extracts the meaning of the query rather than interpreting it as a set of disjoint keywords.

The result is that searches are easier to initiate and receive more and better-targeted responses over the specified range of web content. SmartSearch finds all relevant content items, not just the ones with the specified keywords, and it will find the next best matches in cases where exact matches are not available. This eliminates the “engineer oriented” requirement of traditional search engines, where the user has to learn Boolean filtering techniques and evaluate which keywords, word combinations, or search rules would find all relevant content items or fill in forms to filter the results further.

You can see an example of SmartSearch at [www.leiki.com/urldemo](http://www.leiki.com/urldemo). Here you can enter any natural language query in the search box. You can also try entering any URL in the search box to find matches for that particular web page.

Try Our Demo

SmartSearch is based on Leiki Focus, a semantic AI software engine designed to understand and create a detailed profile of any piece of text and intelligently match similar items together. Focus identifies over 200,000 concepts using over 5.3 million rules. These rules and categories have been manually crafted by a dedicated team of professional linguists during almost two decades of live Focus deployments and are continuously updated by our advanced ontology center in Helsinki.

Telecom operator Elisa (elisa.fi) using SmartSearch on their customer service site (translated to English).

Google Search using same search terms does not find any results on the same elisa.fi site.

## Getting Started

Detailed instructions and technical support will be provided when starting to use the service. Our standard pricing model is a monthly fee on service level and daily traffic volume. Please contact us at [sales@leiki.com](mailto:sales@leiki.com) for a quote for your application.
